

DefiPlaza is an ecosystem of decentralized exchanges on Ethereum

DefiPlaza is an ecosystem of decentralised exchanges on Ethereum with the lowest possible gas fees and a very high capital efficiency. This is made possible due to original smart contracts written from scratch and with the utmost efficiency in mind.

The 16-token pool of the first DEX of DefiPlaza is 15 times more capital efficient than traditional pair-based DEXes, offering up to 15 times more fees per unit of liquidity at the same trading volume.

Investors invest in a basket of 16 tokens like an ETF fund and receive an APR of 75% when staking their LP tokens.

Swap 65% cheaper than any other DEX

Our roadmap, this is what keeps us busy

Q3 2021: The launch of DefiPlaza

Going back to the fundamentals of swapping tokens, DefiPlaza was deployed as the most cost-effective DEX on Ethereum. With 120 trading pairs, the lowest gas costs and very low fees it has since brought the best deal in DeFi to our users.

Q4 2021: 1inch integration

Users of the 1inch aggregator can now use DefiPlaza to swap with even lower fees. The 1inch Network unites decentralized protocols whose synergy enables the most lucrative, fastest and protected operations in the DeFi space.

Q1 2022: Website redesign

Based on requests from the community and with the help of a professional designer, the website and trading app are redesigned to the highest standard. A clean mix of modern DeFi design with ancient Greek elements will give the project a recognisable visual brand.

Q2 2022: WalletConnect

Next to supporting MetaMask, we will launch our implementation of the popular WalletConnect standard. Enabling more wallets for our users both on desktop and mobile.

Q3 2022: StablePlaza

Taking the same gas saving engineering approach as DefiPlaza, we will deploy a multi-token exchange based around swapping stable tokens. This will take the record-low costs of DefiPlaza and combine them with dedicated stable coin bonding curves.

Q3 2022: MoonPlaza

The MoonPlaza will be a place where new projects can get their tokens listed, giving young projects a cost effective way of gaining liquidity against several mainstream tokens like ETH and USDC/USDT in one go. Naturally, the DefiPlaza low-cost philosophy will also extend to MoonPlaza.

Q1 2023: Live on Radix blockchain

When the Radix Babylon network becomes available, DefiPlaza will be among the first functional DEXes. Here we will aim to have the most capital efficient multi-token AMM that we can build, adding more features since gas costs are no longer a concern.

Tokenomics

 Total supply: 67.9M DFP2

 50M staking rewards

 12.9M hard fork from v1

 2.5M community fund

 2.5M locked team incentives

The profits from the community run arb bot are used to buy DFP2 on DefiPlaza and then burned, reducing the total supply. 250k DFP2 has burned until April 1, 2022.

Token utility

By staking the XDP2 LP token investors receive DFP2 in return. DFP2 is the governance token, used for governance votes.

With the launch of StablePlaza in Q2 2022, DFP2 can be used to earn a part of the trading fees as well.

DFP2 will be part of any project launched in the DefiPlaza ecosystem, both on Ethereum and future blockchains like Radix.

DFP2 will also be regularly burned from the profits of the community run arb bot, decreasing the total supply and increasing the price of DFP2

Highlights

- US\$ 55M in total trade volume per mid April 2022
- 19k swaps per mid April 2022
- Smart Contracts audited by Pessimistic.io
- 1inch integrated DefiPlaza to offer cheaper trades
- Building an ecosystem of optimized DEXes with the launch of StablePlaza and MoonPlaza
